

# Achieve business outcomes faster and accelerate innovation with KeyCore Managed Services

## Enabling digital transformation at speed, securely

88% of enterprise IT organizations have a cloud-first strategy, yet 86% of enterprise infrastructure spend is still directed to technology on-premises. Lack of cloud IT skills, tooling, and processes hinder digital transformation execution plans and thus business outcomes.

Regardless of where your organization is in your digital transformation process, KeyCore powered by AWS Managed Services (AMS) provides an operating model designed to accelerate your digital transformation and focus your resources on innovation and delivering business results.

## Benefits

### Operational Flexibility

KeyCore will provide mission-critical application support and leverages enterprise operating model. KeyCore will be the primary point of contact with AWS.

### Enhanced Security & Compliance

KeyCore provides security management, monitoring, reporting, and compliance conformance packs to help you meet compliance regulations.

### Cost Optimization

KeyCore help identify financial and capacity optimizations and apply cost savings to your monthly fee.

### Local DevOps experts & application monitoring

KeyCore have local experts, unique capabilities within DevOps & customized application workloads monitoring with remediation.

## About KeyCore Managed Services

KeyCore deliver customer cloud operations with preconfigured run books for commonly automated tasks, we are able to give you 24/7/365 service-desk, incident management & high availability on your business-critical applications. Our dedicated DevOps teams will assist you with cost optimization as a continual process of refinement and improvement over the span of a workload's lifecycle. KeyCore is an advanced migration partner, which gives you a secure and cost saving cloud-migration and transition your business applications to our managed services. KeyCore will managed your websites, database, middleware and applications.

## KeyCore delivers automation, operational excellence, and speed

KeyCore works with your organization to provide the level of cloud environment management that meets your needs. From incident management to infrastructure optimizations. KeyCore leverages AMS enterprise operating models, infrastructure automation, and a broad range of expertise to grow and maintain your cloud footprint, allowing your organization to focus on business growth opportunities, while KeyCore works with AMS to optimize your infrastructure and handle incidents on your behalf. KeyCore extends AMS benefits to your cloud environment and creates a single-point-of-contact to provide management of AWS applications, support for modernized architectures, customized infrastructure-as-code, and IT Service Management systems integration.
